

# St. Francis Clay Products

THE ULTIMATE ROOF TILE FOR A  
QUALITY ROOFING

**St. Francis  
Clay Products**

## GREAT LOOK... GREAT DURABILITY

Raised from the cradle of terracotta culture in India, Kerala, ST. FRANCIS CLAY PRODUCTS came into being in the year 1987. The factory is located at samballor, (Thrissur Dt.), Kerala. We have designed and manufactured tiles of superior style that went along with both modern and traditional architectural concepts. Terra cotta is one of the most versatile and time-tested building materials out there. It's made from fired clay and has been used for thousands of years in everything from major building construction down to decorative sculptures and functional pots. It's this versatility that has made it a popular choice for builders and homeowners.

Companies in every part of the construction industry are going green, and roofing is no exception. There are lots of options available, from metal to thermoplastic, but if you want a stylish roof that really stands out, you might want to consider clay roofing tiles. Clay tile wins points for green building on several fronts: It's reflective, it's ventilated and it's actually made of earth. What could be more recyclable?. Also, since clay tiles can last for up to 100 years, you probably won't have to reroof for a very long time. The curved shape of the tiles allows for superior ventilation, so that hot air isn't trapped between the material and the roof in the summer. Also, because they're heavy, they help insulate the home year round.

# PREMIUM ROOF TILES
